

# SUAR WOOD FINISHES

**Are you selecting to order?** Please copy all of the information below your selection and paste into our **Options spreadsheet**. Download the options spreadsheet in the Options section [www.zenddu-catalogue.com](http://www.zenddu-catalogue.com)

Suar wood Clear Matt (Z01-01-07)

Bleached Wood (Z01-02-01)

Dark Brown Wood (Z01-02-05)

Blackwash Wood (Z01-02-06)

Greywash Wood (Z01-02-07)

Whitewash Wood (Z01-02-08)

# SPECIFICATION

## INDOOR PRODUCTS

Batch-to-batch variation in shade may occur within commercial tolerance. Some options may be subject to minimum quantities.

**Usage:** Indoor Products. **All furniture is v-legal certified and kiln-dried.**

**PLEASE NOTE:** Due to the fact that wood is a natural material, variations will occur. Each product can have different natural markings, textures, and natural colour variations. This is all considered normal and adds to the beauty of the products and is not considered a defect.

**Clear Matt Finish:** An acrylic clear matt protective finish is applied over the wood. Due to the natural differences, grains, natural colour variations, age, etc. of wood, the final colour will vary slightly. Composition: Acrylic.

**Bleached Finish:** A chemical is used to bleach the wood to a light finish.

**Dark Brown Finish:** These finishes use translucent wood stains, and an acrylic clear matt protective top finish is applied.

**Whitewash, Blackwash, and Greywash Finishes:** These finishes are paint finishes applied by hand to the wood. No two items will look exactly the same. An acrylic clear matt protective top finish

### Suar wood (*Tetroxylon robustum*)

A popular wood species used in furniture, cabinetry, and flooring in Indonesia. It is known for its hardness, durability, and resistance to insects and decay.

The technical specifications of suar wood include its density, which ranges from 750 to 950 kg/m<sup>3</sup>, and its Janka hardness scale rating, which is at 1,250 to 1,300.

The wood also has a low moisture content, typically ranging from 6 to 8%. Suar wood is commonly recommended for its excellent stability and crack resistance, making it a suitable choice for various applications. However, large, thick table tops can be susceptible to splitting and cracking.
